

Supporting Eco-Friendly Products

ICC Flowtech™, a division of

Advanced Drainage Systems, Inc.

Innovative, imaginative solutions for protecting our most precious resource, water

Flowtech offers a drainage system to effectively reduce and redirect excessive water from commercial and residential building sites, slopes, lawns, and golf courses.

Recycled and Saving

The products are tested to be used with minimal disruptions to surrounding landscaping and lawns. The system is lightweight and replaces gravel and stones with a heavy duty EPS aggregate with engineered channels for excellent flow.

At Flowtech™ we are dedicated to preserving our most precious resource, water. By using Flowtech™ systems the excess water is redirected and redistributed back into the soil.

The aggregate in Flowtech™ systems is 100% recycled material and contain no fines. Gravels systems contain excessive fines from the mining operation. These fines prematurely clog the trench bed and reduce the effectiveness of your system. Flowtech™ Systems have five times the flow rate of gravel systems.
